Github: https://github.com/ShayanPersonal

Education

Major:	Computer Science, **B.S. + M.S.**	**GPA:**	B.S. 3.60 / M.S. 3.85
School:	University of California, Santa Barbara	**Years:**	2013 - 2017 / 2017 - 2018

Overview

Languages
Top: Python, C, C++
Others: Javascript, Java, C#, x86, Ruby, SQL, MATLAB

Areas of Focus
Deep learning, Computer vision, NLP, Computer networks, Security, Software engineering

Toolbelt (Deep learning)
Pytorch, Tensorflow, Keras, CNNs and RNNs for NLP / object recognition, GANs, attention mechanisms, cloud GPUs (AWS + Google Cloud), GTX 1080 ti custom build

Toolbelt (Networks / Security / Other)
Wireshark, libpcap, Scapy, OWASP ZAP, Burp Suite, Bash, Git, Github, MVC frameworks for web apps

Selected Independent Activities

Kaggle Winner: Won **10th place** in **$1.5 million Passenger Screening Challenge** as solo competitor. #1 featured machine learning contest on kaggle.com for 6 months. Created custom neural network where viewpoints are fed to ResNet CNN with spatial pyramid pooling and fused by LSTM with attention. Name on leaderboards is Moejoe.

GauchoMap (300+ users): Published popular Chrome extension for UCSB students. Uses javascript, web scraping.
Piazza.com Vulnerabilities: Discovered and reported multiple severe web vulnerabilities on Piazza.com.
Mobile Wifi Hijacker: Modified rooted Android phone into WiFi “hijacker” that man-in-the-middles nearby devices.

Work Experience

University of California, Santa Barbara (ucsb.edu) **Teaching Assistant** (2018)
- Teaching assistant for Introduction to Computer Communication Networks (CS176A) at UCSB.
- Held office hours, answered student questions, graded assignments.

Palo Alto Networks (paloaltonetworks.com) **Dataplane Software Engineer Intern** (2017)
- Increased productivity by developing Python script to parse and pretty-print PCAPNG packet capture format.
- Improved debuggability by redesigning team’s lab. Set up subnets, network routes, and racked devices.

Thermo Fisher Scientific (fei.com) **Software Engineer Intern** (2016)
- Improved usability of product by coding new installer in C# for Hyperion Scanning Probe Microscope.
- Documented system bringup, backup and restore procedures for new Hyperion system.

UCSB Brain Initiative (brainucsb.com) **Lead Web Developer** (2015)
- Planned and developed website for new UCSB department with campus researchers and web designer.
- Wrote all backend logic (Node.js) and much of frontend design (HTML / CSS / Javascript).

Recent Course Projects

Real-time Path Tracing by Denoising with Convolutional Neural Networks: Proposed and implemented real-time path tracer by repurposing Feature Pyramid Networks of Lin et al. (2017) for denoising.

Homomorphic Encryption on Neural Networks: Implemented homomorphically encrypted neural networks with Vector Homomorphic Encryption of Zhou and Wornell.

Exploring Seq2Seq For Generating Human-Like Responses on Internet Forums: Trained a deep learning agent to predict responses to Reddit posts with Seq2Seq neural network of Sutskever et al.

Research Activity

Start date: January 2018 Location: MIRAGE Lab, UCSB
Collaborating with professor Pradeep Sen to improve the fundamental operations of convolutional neural networks.

Talks

- **Original Work:** *An end-to-end trainable neural network for threat recognition on 3D body scans*
  - Presented to Four Eyes Lab 02 / 2018
- **Original Work** : *Realtime Pathtracing with Neural Networks*
  - Presented to Special Topics seminar 12 / 2017
- **Paper Discussion:** *Imagination-Augmented Agents for Deep Reinforcement Learning*
  - Presented to NLP seminar 01 / 2018
- **Paper Discussion:** *Representation Learning on Graphs: Methods and Applications*
  - Presented to Dynamic Networks seminar 01 / 2018
- **Paper Discussion:** *A Simple Neural Network Module for Relational Reasoning*
  - Presented to NLP seminar 11 / 2017

Awards and Achievements

- Gold medal recipient and 10th place standing in $1.5 million Kaggle Passenger Screening Challenge.
- 2017 recipient of Glen Culler Scholarship, a merit-based scholarship for academic achievement.
- Ee-dan (2nd-degree black belt) in Korean martial art of Soo Bahk Do, taught under Master Dan Lockhart.
- Classically trained pianist with four stage performances from ages 10 through 16.
- Two Youtube channels with combined 4,000+ subscribers and 1.2 million video views.
- 7x member of Dean's List at UCSB.
- GRE: 166 Q, 162 V, 5.5 W ACT: 34

Coursework @ UCSB

Deep learning for NLP
Information theory
Computer vision
Machine learning & AI
Knowledge bases
Databases
Cryptography
Mobile networks
Computer networks
Parallel programming
Distributed systems
Operating systems
Compilers
Computer architecture
Programming languages
Scalable web applications
Computer security
Data structures and algorithms
Computational geometry
Theory of computation
Computational science
Differential equations
Vector calculus
Probability and statistics
Physics

Self-taught

UCL's Reinforcement Learning (online)
Stanford's CNNs for Vision (online)
EPFL's Neuronal Dynamics (online)
Neuroscience & evolution basics (textbooks)

Other

- Natively bilingual in English and Farsi, interested in learning Mandarin Chinese.
- U.S. citizen.
